SIDNEY BRYSON, PH.D.

Solutions Architecture Management | Partner Delivery | Technical Roadmaps | Team Leadership

US Remote | +1 331-228-0002 | sbryson@nvidia.com

Profile

NVIDIA engineering manager and customer architect organizing teams around complex platform delivery, technical roadmaps, and customer integration. Lead NIM Factory release execution; managed Codex/Claude workflow improvements with a development engineer that helped reduce biweekly release staffing from six engineers to two. Bring customer and systems architecture experience since 1999, including equipment-provider proposals, cloud transformation, and distributed engineering leadership.

Experience

NVIDIA | Engineering Manager, NIM Factory / NIMCraft | Late 2024-Present

Align engineering, product, SWQA, infrastructure, compliance, and publishing around delivery priorities, dependencies, readiness evidence, and accountable release decisions.

- Define the NIM Factory Pipelines migration roadmap, sequencing team onboarding, readiness reviews, release-process changes, and legacy-platform retirement.
- Lead on-time biweekly delivery since March 2026 for 16+ LLM NIMs, including Nemotron; coordinate vLLM container builds, security/compliance reviews, validation, and NVAIE/NGC publishing.
- Direct Codex/Claude workflows across teams: NIMCraft API orchestration, failure classification, NVBug creation, SWQA/benchmark triage, and publishing; prioritize harness improvements and track effectiveness.
- Guide performance and accuracy validation across 20+ GPU SKUs and multiple GPU counts; use Jira quality metrics and failure evidence to resolve blockers and assess release risk.

NVIDIA | Holoscan Cloud Native Engineering Manager / Services Architect | 2021-2024

Led cloud/edge platform delivery and healthcare customer integration, translating requirements and deployment issues into engineering priorities.

- Coordinated Holoscan SDK/cloud-native release readiness across engineering, QA, security, and publishing; organized CloudBench and IGX/EGX platform validation.
- Guided engagements with UCSF, Mayo Jacksonville, MGB, and KCL/Answer Digital; aligned customer integration needs with platform capabilities and delivery plans.

Altran/Capgemini | Director, Solution Architect | April 2019-November 2020

Created 50+ pre-sales proposal architectures supporting 10% YoY growth; delivered Tier-1 cloud/Open vRAN RFPs on time. Developed OEM software-segment sales enablement and led Red Hat partnership/OpenShift accreditation efforts for 100+ engineers.

Nokia / Alcatel-Lucent / Lucent | Architecture and Technical Leadership | 1999-April 2019

Nokia (2016-April 2019): cloud/NFV roadmaps, customer workshops, and leadership of a Python Redfish provisioning SDK team delivering on time. Alcatel-Lucent (2008-2016): solution architect and wireless CTO; led India/Bangladesh Agile teams delivering projects 1.5x faster. Lucent (1999-2008): packet-data hardware architecture delivering 3x bandwidth and vendor/interface coordination.

Relevant Skills and Experience

- Team execution: technical roadmaps, work prioritization, staffing efficiency, distributed-team coordination, release governance, and escalation management.
- Customer and partner architecture: requirements workshops, equipment-provider proposals, cloud transformation, deployment validation, technical enablement, and product feedback.
- Platforms: Kubernetes, OpenShift, Docker, OpenStack, Python/Redfish APIs, GitLab CI/CD, GPU validation, NIM/Triton, Codex, and Claude.

Education

Ph.D., Electrical Engineering - North Carolina A&T | M.S., Electrical Engineering - Purdue | B.S., Electrical Engineering - Tuskegee
