SIDNEY BRYSON, PH.D.

GenAI Customer Architecture | Production Inference | Agentic Workflows | Technical Enablement

US Remote | +1 331-228-0002 | sbryson@nvidia.com

Profile

NVIDIA engineering manager and customer architect connecting AI workloads, production inference, and practical customer adoption. Lead biweekly delivery of 16+ LLM NIMs with validation across 20+ GPU SKUs. Managed Codex/Claude harness improvements with its development engineer, helping reduce release staffing from six engineers to two. Bring customer architecture, cloud integration, and technical enablement experience since 1999.

Experience

NVIDIA | Engineering Manager, NIM Factory / NIMCraft | Late 2024-Present

Lead cross-team execution for production LLM inference containers, translating build, benchmark, accuracy, and infrastructure findings into release decisions and engineering priorities.

- Direct agentic workflows across teams using Codex and Claude: NIMCraft API orchestration, failure classification, NVBug creation, SWQA/benchmark evidence, and publishing; measure effectiveness and prioritize improvements.
- Maintain on-time biweekly releases since March 2026 for 16+ LLM NIMs, including Nemotron; coordinate vLLM container builds, legal/security reviews, CVE decisions, and NVAIE/NGC publishing.
- Guide AIPerf performance measurement and GPQA-Diamond accuracy validation across 20+ GPU SKUs and multiple GPU counts; use Jira quality metrics to prioritize fixes and assess readiness.
- Define platform-migration roadmaps, team onboarding, and readiness reviews; coordinate multi-node validation across 22 GPU SKUs.

NVIDIA | Holoscan Cloud Native Engineering Manager / Services Architect | 2021-2024

Led Clara/Holoscan cloud/edge deployment and customer integration across AWS, Azure, and GCP, translating technical requirements into practical deployment and platform priorities.

- Guided engagements with UCSF, Mayo Jacksonville, MGB, and KCL/Answer Digital; converted integration issues into prioritized engineering work.
- Created CloudBench characterization and used Nsight to investigate A100/A6000 workloads; helped scale Triton video segmentation to roughly 780 concurrent streams and 25K FPS across approximately 50 GKE nodes.

Altran/Capgemini | Director, Solution Architect | April 2019-November 2020

Created 50+ pre-sales proposal architectures supporting 10% YoY growth; delivered Tier-1 cloud/Open vRAN RFPs on time. Led Red Hat partnership and OpenShift enablement/accreditation efforts for 100+ engineers.

Nokia / Alcatel-Lucent / Lucent | Architecture and Technical Leadership | 1999-April 2019

Nokia (2016-April 2019): cloud/NFV roadmaps, customer workshops, and a Python Redfish SDK team delivering on time. Alcatel-Lucent (2008-2016): solution architect and wireless CTO; led distributed Agile teams delivering projects 1.5x faster and applied PySpark/Hadoop analytics to wireless networks. Lucent (1999-2008): packet-data hardware architecture delivering 3x bandwidth.

Relevant Skills and Experience

- GenAI operations: LLM NIM lifecycle, vLLM container-build coordination, Nemotron validation, AIPerf, GPQA-Diamond, NVAIE/NGC, and agentic release governance.
- Customer enablement: requirements discovery, architecture workshops, technical proposals, deployment troubleshooting, cloud migration, and engineering/product feedback.
- Platforms and diagnostics: Kubernetes, Docker, Linux, GitLab CI/CD, Python/Redfish APIs, Triton, Nsight, CloudBench, AWS/Azure/GCP, Codex, and Claude.

Education

Ph.D., Electrical Engineering - North Carolina A&T | M.S., Electrical Engineering - Purdue | B.S., Electrical Engineering - Tuskegee
